

Healthy Active Living Education, Grade 10

Open

PPL20

This course enables students to further develop the knowledge and skills they need to make healthy choices now and lead healthy, active lives in the future. Through participation in a wide range of physical activities, students develop knowledge and skills related to movement competence and personal fitness that provide a foundation for active living. Students also acquire an understanding of the factors and skills that contribute to healthy development and learn how their own well-being is affected by, and affects, the world around them. Students build their sense of self, learn to interact positively with others, and develop their ability to think critically and creatively.

Prerequisite: None

Note: Courses for Grade 10 Healthy Active Living Education must address all of the expectations in the curriculum. However, focus courses centred around a particular group of physical activities may be used as the vehicle through which students will attain the expectations.

The possible groupings for Grade 10 focus courses and their corresponding course codes are:

- Healthy Living and Personal and Fitness Activities – PAF2O
- Healthy Living and Large-Group Activities – PAL2O
- Healthy Living and Individual and Small-Group Activities – PAI2O
- Healthy Living and Aquatic Activities – PAQ2O
- Healthy Living and Rhythm and Movement Activities – PAR2O
- Healthy Living and Outdoor Activities – PAD2O

For more information about the delivery of such courses, see pages 20–21.

LIVING SKILLS

Student learning related to the Living Skills expectations takes place in the context of learning related to the Active Living, Movement Competence, and Healthy Living strands, and should be assessed and evaluated within these contexts.

OVERALL EXPECTATION

By the end of this course, students will:

1. demonstrate personal and interpersonal skills and the use of critical and creative thinking processes as they acquire knowledge and skills in connection with the expectations in the Active Living, Movement Competence, and Healthy Living strands for this grade.

SPECIFIC EXPECTATIONS

1. Living Skills

By the end of this course, students will:

Personal Skills (PS)*

- 1.1 use self-awareness and self-monitoring skills to help them understand their strengths and needs, recognize sources of stress, take responsibility for their actions, and monitor their own progress as they participate in physical activities, develop movement competence, and acquire knowledge and skills related to healthy living (e.g., **Active Living**: consider what effect their background [family, social, economic, cultural] and experiences have had on the way they think about physical activity or the activities they choose; **Movement Competence**: monitor changes in their body positions during various phases of movement to improve their locomotor and manipulation skills; **Healthy Living**: describe ways to recognize sources of stress and assess the relative importance of their stressors)

Student: “I’m trying to improve my catching skills in cricket and other activities, so I’ve been paying close attention to what I’m actually doing when I catch and comparing it to what I should be doing. I have to remember to be on the balls of my feet when I’m in the ready position, so that I can get a quicker start and have a better chance of getting to the ball. I need to keep my eyes on the ball as I move into position to catch it. I’m also paying more attention to cushioning the catch by letting my arms and hands give a bit after I have made contact with the ball. I still have to do more work on adjusting my legs, arms, and torso so that I can recover my balance faster after making the catch and get ready to throw the ball to a teammate.”

- 1.2 use adaptive, management, and coping skills to help them respond to the various challenges they encounter as they participate in physical activities, develop movement competence, and acquire knowledge and skills related to healthy living (e.g., **Active Living**: use planning skills to adjust goals and training schedules and revise fitness plans in response to their ongoing monitoring and assessment of their progress in developing their personal fitness; **Movement Competence**: describe how adopting a positive attitude, practising regularly, and using constructive feedback for self-correction

* The abbreviation(s) for the three categories of living skills – PS, IS, and CT – appear in square brackets at the end of expectations, in strands A–C, to which those skills are clearly connected. (See pp. 25–29 for a discussion of living skills.)

contribute to being successful when developing new skills; **Healthy Living:** explain how paying attention to one's own emotions and expressing them in a positive way can assist in avoiding a conflict or preventing a conflict from escalating; describe how various coping strategies can be used to enhance their mental health and well-being)

Teacher prompt: "Sometimes when we are angry we say things that we don't mean, or accuse people of things unfairly, and then feel badly about this later. What strategies can we use to manage these strong emotions and minimize the potential for interpersonal conflict?"

Student: "Taking a deep breath, pausing to reflect before speaking, acknowledging our emotions, and using 'I' statements are all strategies that help us to come across in more rational ways when dealing with tense situations."

Interpersonal Skills (IS)*

- 1.3** communicate effectively, using verbal or non-verbal means, as appropriate, and interpret information accurately as they participate in physical activities, develop movement competence, and acquire knowledge and skills related to healthy living (e.g., **Active Living:** use respectful words when communicating with others during activities; **Movement Competence:** use non-verbal communication, such as making eye contact with a teammate or looking for a target hand when passing an object during a territory game; **Healthy Living:** demonstrate the ability, through role play, to use refusal skills to deal with potentially challenging situations involving the illicit use of drugs)
- 1.4** apply relationship and social skills as they participate in physical activities, develop movement competence, and acquire knowledge and skills related to healthy living to help them interact positively with others, build healthy relationships, and become effective group or team members (e.g., **Active Living:** support others by encouraging them and/or providing them with assistance when they are participating or learning new skills in a variety of physical activities; **Movement Competence:** apply appropriate conventions of fair play and etiquette and demonstrate inclusiveness as they participate in a variety of physical activities; **Healthy Living:** explain why being respectful is an important contributor to maintaining healthy relationships)

Critical and Creative Thinking (CT)*

- 1.5** use a range of critical and creative thinking skills and processes to assist them in making connections, planning and setting goals, analysing and solving problems, making decisions, and evaluating their choices in connection with learning in health and physical education (e.g., **Active Living:** explain the connections between active living and personal fitness, and describe the benefits of being active and fit; **Movement Competence:** evaluate the offensive or defensive strategies that they used during various activities, and determine what they could do differently to improve their performance in those activities; **Healthy Living:** describe how current dietary trends could influence their food choices, and explain the implications of these choices for healthy development and active living)

A. ACTIVE LIVING

OVERALL EXPECTATIONS

By the end of this course, students will:

- A1.** participate actively and regularly in a wide variety of physical activities, and demonstrate an understanding of factors that can influence and support their participation in physical activity now and throughout their lives;
- A2.** demonstrate an understanding of the importance of being physically active, and apply physical fitness concepts and practices that contribute to healthy, active living;
- A3.** demonstrate responsibility for their own safety and the safety of others as they participate in physical activities.

SPECIFIC EXPECTATIONS

A1. Active Participation

By the end of this course, students will:

- A1.1** actively participate in all aspects of the program (*e.g., being appropriately prepared and equipped to participate in the activity, being engaged in the activity, striving to do their personal best, adapting to challenges when exploring new activities, monitoring their progress and successes in order to boost their confidence and increase their willingness to try new activities*), choosing from a wide and varied range of activities (*e.g., individual activities; small- and large-group activities, sports, and games; outdoor and recreational pursuits*) [PS, IS]

Teacher prompt: “What encourages you to do your best? How does doing your best contribute to active participation?”

Student: “Being able to help choose the types of activities we participate in motivates me to do my best. Encouragement and positive feedback also motivate me. To do something well, you have to work at it, so the harder I try, the more likely I am to improve. If I am good at an activity, I’m more likely to keep doing it.”

- A1.2** demonstrate an understanding of factors that contribute to their personal enjoyment of being active and that can support their participation in physical activity throughout their lives and explain what actions they can take to overcome challenges and barriers to regular physical activity [PS, CT]

Teacher prompt: “Social or cultural factors sometimes influence the way we think about physical activity and the opportunities we have for physical activity. Can you give me an example of how different backgrounds could encourage or limit participation? Can you suggest how a person might deal with some of these limitations and still remain active?”

Students: “For me, doing things connected to my cultural background has made me more active. I participated in a powwow in our community in the summer and really liked the dancing, drumming, and sharing of gifts. Now I dance a couple of times every week, and I want to join a community group that performs powwow dances across Ontario. I’m also meeting new people and learning more about my culture and heritage.” “My parents emphasize academics and don’t consider physical activity important. Once I decided to become more active, I had to convince them that time spent on physical activity was not wasted. I pointed out that physical activity leads to better health, and that leads to better

physical and mental performance. I persuaded them that my marks wouldn't suffer and might even get better. Now they are happier to let me take part in physical activities with my friends." "Being physically active has always been a big part of my family's culture. My mother regularly walks with her friends, and I sometimes join them."

- A1.3** demonstrate positive social behaviours and adherence to ethical and fair play standards that contribute to creating a rewarding and enjoyable environment for participation in physical activities (*e.g., encourage others; show respect for others' points of view; listen attentively; show appreciation; encourage fair play; be inclusive; provide leadership by leading an in-class activity such as a warm-up or cool-down or suggesting ways to adapt an activity so that individuals with different physical or intellectual abilities can successfully participate*) [PS, IS]

Teacher prompt: "Give me some examples of actions you can take or attitudes you can adopt that create a positive atmosphere in class and support lifelong participation in physical activity."

Students: "Today in class a sighted student was helping a student who is visually impaired by guiding her during our light run/walk." "My friend, who uses a walker, showed me how we could adapt the game so that we both could play. Being inclusive encourages everyone to participate. Focusing on what people can do instead of what people can't do helps to overcome barriers throughout life and increases opportunities for all to be active." "In our class we set up a buddy system as a way of encouraging each other to do particular activities, be more active, and work on our skills. Working with a buddy keeps you motivated and improves your chances of success."

A2. Physical Fitness

By the end of this course, students will:

- A2.1** participate regularly in sustained moderate to vigorous physical activity to the best of their ability for a minimum of twenty minutes (*e.g., continuous circuit training, cross-country skiing, ultimate disc, swimming*) [PS]

Teacher prompt: "How do you know that you are being active to the best of your ability when participating in various physical activities?"

Student: "It is a personal measure. I know what it feels like to push myself. My heart rate goes up, I breathe faster, I get hot, and I can feel my muscles working. If I am taking breaks I don't really need, not breathing very hard, or not feeling some tension in my muscles, I know I am not working my hardest. Once my body is used to working at a certain intensity for a certain period of time, I know I can push myself to do a little more. How much more will depend on my comfort range and what I want to accomplish."

.....

Teacher prompt: "We get a certain amount of physical activity just through the routine activities of everyday life. We also get twenty minutes or more of moderate to vigorous physical activity in class. But to get all of the health benefits, we need to accumulate sixty minutes of moderate to vigorous physical activity in addition to what we get from routine daily activities. Finding the time for daily physical activity is not always easy. What can you do to ensure that you get enough activity every day?"

Students: "I can make physical activity a priority. One way to do that is to set aside a certain amount of time every day for physical activity and make it a fixed part of my daily routine, so that it only gets bumped from my schedule in extreme cases." "I can join a sports club or league. It will be fun, and the regular schedule of games will help to keep me committed." "Instead of travelling by car, I can use active transportation – walking/ wheeling, biking, skateboarding, or in-line skating." "I can be more active in small ways,

like taking the stairs or walking an extra stop when I take the bus.” “I can build activity into my leisure time and social life. Instead of watching TV or playing video games, I can go for a walk or a bike ride, play a pickup game of ball hockey, or throw a disc with a friend. I am working at limiting the amount of time I spend sitting.”

- A2.2** describe factors that affect personal physical fitness (*e.g., eating habits; heredity; social, economic, and cultural influences; maturation; physical challenges; effectiveness of training routines and adherence to training principles, such as overload, individuality, and specificity*), and explain the benefits of developing fitness as part of an overall healthy active way of life [PS, CT]

Teacher prompt: “One of the basic benefits of physical fitness is having the ability to perform daily activities and routine tasks with relative ease – things like walking or wheeling a reasonable distance, bending, stretching, carrying, lifting, climbing, and reaching. This is called *functional fitness*. Involvement in more vigorous activities requires a higher level of fitness. What level of fitness or what aspects of fitness are important to you, and what factors do you have to consider to maintain that kind of fitness?”

Student: “I want to maintain my cardiorespiratory fitness, so that I have lots of energy for daily activities, sleep well, and generally feel good. To do that, I’ll need to do activities that will work my heart and lungs as well as resistance training. I’ll also need to think about how the food I eat affects my level of fitness, and change my diet as necessary.”

- A2.3** assess their level of health-related fitness during various physical activities, and monitor changes in their health-related fitness over time [PS, CT]

- A2.4** develop, implement, and revise a personal fitness plan (*e.g., use the data from their fitness assessment and an analysis of their own strengths and limitations to determine a starting point and set goals; apply training principles to help achieve goals; develop strategies to overcome challenges; celebrate successes; assess results and revise goals or training routines as needed*) [PS, CT]

Teacher prompt: “What part of personal fitness do you want to focus on? Why? How will you address that objective in your plan?”

Students: “I need activities that will work my heart and lungs, so I’m doing half an hour of continuous wheeling in my wheelchair every day, either indoors or outdoors, and resistance training to build my upper-body strength. To support my cardio work, I’ve also decided that I need to cut back on some of the less healthy foods that I like to eat.” “I would like to improve my flexibility and speed to prepare for the upcoming soccer season. My plan so far includes a variety of stretching and strengthening exercises and some interval training to balance my program. I’ll adjust the frequency and intensity of the exercise as I go, so that it provides just enough stress for my body to adapt to but also allows enough rest time for healing.” “I want to work on developing core strength, so I’ll focus on exercises that strengthen my back and abdominal muscles. This will help to improve my balance for sit skiing.” “I know I sit around too much, and I want to start being more active and do more things that make me sweat and breathe a little harder. I enjoy ice skating and do it once a week in the winter, but I’m going to start going more often, and I think I’ll play pickup basketball more often at the outdoor courts in my neighbourhood this summer. I’m also going to try other activities and gradually increase my weekly activity time over the next few months.”

A3. Safety

By the end of this course, students will:

- A3.1** demonstrate behaviours and apply procedures that maximize their safety and that of others (e.g., controlling level of physical contact during activities; adjusting activity levels to adapt to changes in their physical condition; wearing safety equipment where necessary, such as when wall-climbing and cycling; demonstrating social responsibility by creating a safe activity environment and encouraging others to do so; working with a buddy when hiking, cross-country skiing, or swimming) in a variety of physical activity settings (e.g., gym, fitness room, field, hiking and snow trails, recreational facilities, bicycle lanes) [PS, IS, CT]

Teacher prompt: “What are some things you can do to make conditions safe for your activity?”

Students: “We can look for hazards, like spilled water on the floor or unnecessary equipment on the playing area, and remove them.” “If an activity requires supervision, we shouldn’t start until we have a qualified person to supervise it.”

- A3.2** identify resources that can be of assistance in emergency situations related to physical activity (e.g., automated external defibrillator [AED] to restart the heart; first-aid kit for minor injuries; communication devices such as intercoms, walkie-talkies, and cell phones; GPS device for determining location; bailer [one per craft] for use when canoeing, kayaking, or boating; flotation device or reaching pole for assisting a person struggling in the water; epinephrine autoinjector for someone with a severe allergic reaction or inhaler for someone with asthma) [PS, CT]

B. MOVEMENT COMPETENCE: SKILLS, CONCEPTS, AND STRATEGIES

OVERALL EXPECTATIONS

By the end of this course, students will:

- B1.** perform movement skills, demonstrating an understanding of the basic requirements of the skills and applying movement concepts as appropriate, as they engage in a variety of physical activities;
- B2.** apply movement strategies appropriately, demonstrating an understanding of the components of a variety of physical activities, in order to enhance their ability to participate successfully in those activities.

SPECIFIC EXPECTATIONS

B1. Movement Skills and Concepts

By the end of this course, students will:

- B1.1** perform stability and locomotor skills in combination in a variety of physical activities while responding to external stimuli (*e.g., move through a variety of stations in an obstacle course; demonstrate a sequence of positions and movements while dancing to music; perform a flip turn in aquatics*) [PS, IS, CT]

Teacher prompt: “What are some points to keep in mind when you are starting in-line skating?”

Student: “For a beginning in-line skater, balance and skating posture are very important. Stand with your hands in front of you and your feet no more than shoulder-width apart. Push gently to start the glide. While skating, keep your knees slightly bent and try not to bend your upper body forward, as your head, chest, and hips need to be over your skates to keep your body stable.”

.....

Teacher prompt: “What are the key things to remember when starting out of the blocks in the hundred-metre sprint?”

Student: “Explode out of the blocks by using your arms and legs to power the body forward, do not stand up immediately when starting but come up gradually to maintain momentum, keep your head up, and stay focused on the finish line while trying to ignore distractions around you.”

- B1.2** perform locomotor and manipulation skills in combination in a variety of physical activities while responding to external stimuli (*e.g., send objects, varying distance and placement, to advance runners in striking/fielding activities; move into position to receive an object in net/wall activities; maintain control of the ring while moving towards the opponent's net in a game of ringette; throw a ball, perform a full turn, and catch the ball while performing a rhythmic movement sequence*) [PS, IS, CT]

Teacher prompt: “What do you need to do to maintain possession of the ball or puck while being opposed by a defender in soccer, field hockey, or sledge hockey?”

Student: “To maintain possession in any of these activities, you need to keep the ball or puck close to your body and away from the defender. You should also keep your head up at all times and keep your eyes focused on what’s happening around you.”

- B1.3** demonstrate an understanding of the phases of movement (i.e., preparation, execution, follow-through), and apply this understanding to refine skills as they participate in a variety of physical activities [PS, CT]

Teacher prompt: “Using the proper technique when doing full or bent-knee push-ups is the most effective way to gain benefits when doing these exercises. To get ready, lie face down with your hands at shoulder level, palms flat on the floor and slightly more than shoulder-width apart, and your feet together and parallel to each other. Hold your body tight, keep your legs straight, and perch on your toes or knees. To execute, take a deep breath, then slowly and steadily extend your arms all the way without locking your elbows and push up as you exhale. Rest for a second, holding yourself in this position. To follow through, inhale as you lower yourself back down, slowly and steadily, until your chest is just off the floor. Repeat the sequence. Exhale up. Rest with your breath pause. Inhale down. What steps would you follow if you do push-ups from a wheelchair?”

Student: “When I do push-ups from my wheelchair I follow more or less the same steps. After locking the wheels so I don’t roll, I put my forearms on my armrest and use my arms to lift my body as far out of the chair as I can. I hold this position for a few seconds, and then slowly lower myself back into the chair. I exhale as I lift and inhale as I go back down.”

- B1.4** apply appropriate movement principles* in order to refine skills in a variety of physical activities (e.g., *extend all joints to achieve maximum force in the execution phase of an overhead or underhand serve in a net/wall activity; bend knees to lower centre of mass to increase stability in wrestling*) [PS, CT]

Teacher prompt: “What do you need to do to serve a ball with more power?”

Student: “To serve with more power, I need to produce more force by using all of my joints. I can do this by putting my whole body into the serve. As I extend my legs, twist my trunk, extend my arm, and follow through, I combine the forces from all of these actions and therefore get more power.”

.....

Teacher prompt: “How can we control where a curling rock goes?”

Student: “The amount of force we apply to the rock when we throw it determines how fast it will go and how far. If we put a spin on the rock when we throw it, we can also make it curl in the direction of the spin. Sweeping reduces the amount of friction between the ice and the rock and makes the rock go faster, farther, and straighter. When we stop sweeping, the additional friction makes the rock slow down and start to curl.”

B2. Movement Strategies

By the end of this course, students will:

- B2.1** demonstrate an understanding of the components of a range of physical activities (e.g., *movement skills, game structures, basic rules and guidelines, conventions of fair play and etiquette*), and apply this understanding as they participate in a wide variety of physical activities, in a range of indoor and outdoor environments (e.g., *gym, fitness room, ice rink, pool, park, recreational facilities, hiking and snow trails*) [IS, CT]

* See pages 34–35 for background information and a description of movement principles.

Teacher prompt: “Recreational activities such as in-line skating, skateboarding, ice-skating, and sit-skiing have similar components. All of them, for example, require having balance, as well as gliding and stopping skills. Some of the safety guidelines are similar too. We should prepare for these activities by doing warm-ups, and we should wear the proper protective equipment. What other factors should be considered when engaging in these activities?”

Student: “All of these activities require sharing space or facilities with others, so all of them have rules of etiquette to ensure that these spaces are shared safely and with respect for others. When skateboarding or in-line skating on bike paths and trails, be aware of others around you so that everyone can share the space safely; skate or board in single file on the right side of bike paths and trails, and when passing pedestrians, slow down, warn them you are going to pass, and tell them what side you are passing on. In recreational ice-skating, skate near the boards around the rink if you’re a beginner. More experienced skaters should give beginners lots of space. Always skate in the same direction as other skaters.”

.....

Teacher prompt: “Many activities require some kind of equipment, but the equipment you normally use may not always be available. Can you give me some examples of how you can improvise or adapt to make up for a lack of equipment?”

Students: “We could use a piece of sports equipment when doing fitness activities. For example, if we didn’t have a weighted bar to use while doing waist twists for flexibility, we could hold a hockey stick behind our shoulders instead.” “Someone in a wheelchair could hold a ringette stick in one hand and do side bends, gradually extending the stick farther away from their body and wheelchair.” “When working on upper arm strength, we could perform dips using a bench if we didn’t have access to a weight machine.”

-
- B2.2** apply analytical and problem-solving skills to identify and implement tactical solutions that will increase their chances of success as they participate in a variety of physical activities (e.g., **individual activities:** *pace themselves to conserve energy during an endurance run; choose a course suited to their experience or fitness level when orienteering;* **target activities:** *set up deflections from objects in the area of play to get around obstacles and get closer to the target;* **net/wall activities:** *maintain a ready position in order to be prepared to move in any direction to play the ball or shuttle when receiving a serve or when in transition between offence and defence;* **striking/fielding activities:** *if playing the outfield, shift to cover the area that the batter is most likely to hit to; communicate with teammates about when to run;* **territory activities:** *pay attention to game play in order to be ready to respond and change quickly from offence to defence*) [PS, IS, CT]

Teacher prompt: “What are some effective ways to maintain possession when playing ultimate disc?”

Student: “Use short passes and move quickly to get into position. Be aware of your teammates’ positions so that you can support them by being ready to receive a return pass. Be aware of where the defenders are, so you can avoid them.”

Teacher: “What other types of activities could you apply these ideas to?”

Student: “These are also good things to do in other territory games, such as soccer, wheelchair basketball, speedball, rugby, field hockey, and broomball.”

-
- B2.3** demonstrate an understanding, through participation and discovery, of how developing their ability to apply movement skills, concepts, and strategies in various physical activities affects their competence, confidence, and desire to participate in these and other physical activities [PS, CT]

Teacher prompt: “How can your competence and confidence in one kind of activity give you the confidence and ability to participate successfully in other activities?”

Students: “Skills that are required in one activity are often required in others. When we did yoga, I learned how to develop core strength and balance. That gives me an advantage and a greater sense of confidence when I participate in other physical activities that require core strength and balance, such as a dance or fitness routine, skating, delivering the ball in goal ball, bowling the ball in cricket, or hiking.” “I learned how to pace myself in long-distance swimming, but it’s also a useful tactic that can be used in other distance activities like speed-walking, running, wheeling, or cycling.”

.....

Teacher prompt: “How does understanding the offensive and defensive strategies of a particular activity help you to be more successful in a similar activity?”

Student: “In soccer we often try to create open space by spreading the offence. This causes the defence to open up and gives an attacker a better opportunity to get into scoring position or pass to a teammate who can get into scoring position. I’ve just started playing water polo, but I find I’m catching on to the game very quickly because this and a lot of other strategies that we use in soccer are used in water polo as well. This is also true in many other sports. Players in European handball and tchoukball, for example, use a number of similar strategies.”

C. HEALTHY LIVING

Healthy Living Learning Summary for Grade 10: Key Topics*			
Topic	C1. Understanding Health Concepts	C2. Making Healthy Choices	C3. Making Connections for Healthy Living
Healthy Eating		C2.1 Eating habits and choices – physical and emotional factors [PS, CT] C2.2 Nutritional implications of dietary choices and trends [PS, CT]	C3.1 Using consumer influence to promote healthy eating [CT]
Personal Safety and Injury Prevention	C1.1 Mental health – factors that enhance [PS, IS]	C2.3 Conflict – within oneself and with others; resolution strategies [PS, IS, CT]	C3.2 Minimizing health and safety risks – physical and personal environment [PS]
Substance Use, Addictions, and Related Behaviours	C1.2 Effects on health and well-being [PS]	C2.4 Responding to challenges involving substance use or addictions – use of living skills [PS, IS, CT]	C3.3 Addiction-related issues – local, national, and global [CT]
Human Development and Sexual Health		C2.5 Decision making, communication, healthy sexuality [PS, IS, CT]	C3.4 Misconceptions relating to sexuality [CT] C3.5 Relationships – effects on self and others [PS, IS, CT]

* This chart is extracted from the complete Grade 9–12 Healthy Living Learning Summary chart on pages 204–205. The topics are listed on the left, and the focus of each expectation is summarized briefly, to give teachers a quick overview of the strand.

OVERALL EXPECTATIONS

By the end of this course, students will:

- C1.** demonstrate an understanding of factors that contribute to healthy development;
- C2.** demonstrate the ability to apply health knowledge and living skills to make reasoned decisions and take appropriate actions relating to their personal health and well-being;
- C3.** demonstrate the ability to make connections that relate to health and well-being – how their choices and behaviours affect both themselves and others, and how factors in the world around them affect their own and others' health and well-being.

SPECIFIC EXPECTATIONS

C1. Understanding Health Concepts

By the end of this course, students will:

Personal Safety and Injury Prevention

- C1.1** demonstrate an understanding of factors that enhance mental health and emotional and spiritual well-being [PS, IS]

Teacher prompt: “Being mentally healthy requires finding balance in life, and includes things like being able to engage in productive daily activities, maintain fulfilling relationships, adapt, and cope with stress. Mental health and emotional and spiritual well-being are enhanced by both external factors and internal factors. External factors include social, economic, and cultural factors such as having a supportive network, including family, other trusted adults, and friends; being given boundaries and expectations; and being able to develop a sense of empowerment, which comes from things like feeling safe and having a sense of purpose. Having a clean environment with access to green spaces can also be beneficial to our mental health and well-being. Internal factors include personal characteristics, such as having a clear sense of self, the ability to use coping and self-monitoring skills, and social competence, which includes being able to make healthy choices and having cultural pride. For many First Nation, Inuit, and Métis peoples, understanding one’s culture and identity is an important component of spiritual health. How does having these factors help you to become healthy, successful adults?”

Students: “These factors help build our self-esteem and self-confidence. Along with self-discipline and effective problem-solving and decision-making skills, they help us cope with negative influences, make wiser choices, and avoid getting involved in things that can lead to injury or harm.” “Not having financial worries can make it easier to cope day to day; however, being financially stable doesn’t ensure mental and emotional well-being.” “I am finding out more and more about my Métis heritage. I attended a memorial feast for the first time and saw how it helped people deal with their grief in a very supportive environment. I really knew then I had an extended family larger than I realized. I know I can go to them when I need support, and that will help me make healthy choices.”

Substance Use, Addictions, and Related Behaviours

- C1.2** demonstrate an understanding of the impact of substance use and addictive behaviours on all aspects (*e.g., physical, emotional, cognitive, spiritual, social, economic*) of a person’s health and well-being [PS]

Teacher prompt: “Substance *misuse* is the use of substances in ways that are illegal or not recommended medically. Substance *abuse* refers to excessive use of substances, despite the physical, cognitive, emotional, social, legal, or economic harm that this may cause to oneself or others. Give examples of different ways in which substance misuse or abuse and addictive behaviours can affect a person’s health and well-being.”

Students: “Misuse of alcohol and other substances impairs your judgement, so you can easily make mistakes that lead to serious injury or death or that get you in trouble with the law. Alcohol can be a factor in car crashes and drownings, fights, criminal activities, antisocial behaviour, and behaviour that could lead to injury or harm.” “Alcohol abuse can harm relationships. It can also create serious medical problems, such as alcohol poisoning from binge drinking or liver and kidney disease later in life as a result of long-term abuse.” “Drinking alcohol while pregnant can lead to the baby being born with fetal alcohol spectrum disorder (FASD).” “Drug abuse can limit your ability to interact socially, do your schoolwork, or keep a part-time job. The financial costs of drug use could lead to other problems, including some with potential for conflict and violence.” “Someone with

an online gambling, gaming, or shopping addiction is in danger of spending money they do not have and of isolating themselves socially.” “Abuse of substances or addictive behaviours may lead a person to reject their spiritual beliefs.”

.....

Teacher prompt: “First Nation, Métis, and Inuit cultures often consider the broad-based community impact of addictions in their approaches to healing and treatment. What are some dimensions of healing in these cultures?”

Student: “Having an understanding of who you are and being proud of your heritage are an important part of being healthy and are also important in healing. Elders and/or traditional healers from within the community and often from other communities and regions provide support for individuals, families, and the community to help them heal. The idea is that one person’s healing connects to the well-being of the community. Songs, dances, games and activities, stories, prayers, and ceremonies are some community-based healing methods that are used.”

C2. Making Healthy Choices

By the end of this course, students will:

Healthy Eating

- C2.1** explain how their knowledge of physical and emotional factors that influence personal eating habits (*e.g., level of physical activity, physical stage of development, hunger and satiety cues from their bodies, food allergies and sensitivities, hydration and nutritional needs, body image, peer and family influence, stress*) can be applied to making healthy eating choices [PS, CT]

Teacher prompt: “In addition to eating for energy and nourishment, people eat – or choose not to eat – for all kinds of reasons, including comfort, pleasure, celebration, body image, and peer pressure. It is important to be aware of how these factors can affect healthy food choices. Give me an example of an emotional or social factor that may influence your food and beverage choices.”

Student: “We can be influenced by unrealistic media images of ideal bodies. Accepting these unrealistic ideals as the norm and feeling that you don’t measure up to them can lead to unhealthy eating habits, such as crash dieting, skipping meals, or using unhealthy supplements. We need to recognize that healthy bodies come in all shapes and sizes.”

- C2.2** assess the nutritional implications of a variety of dietary choices, including those reflecting current dietary trends, and explain how they can make personal choices that will provide the nutritional requirements for a healthy, active life [PS, CT]

Teacher prompt: “People can make dietary choices for a variety of reasons, such as concerns about the treatment of animals, food allergies or sensitivities, environmental concerns related to food production methods, a desire to eat local food, beliefs in the nutritional benefits of consuming or avoiding certain foods, or the desire to be more energetic or to maintain a healthy weight. What are some dietary practices that are common in Canada today? How consistent are these with the recommendations in Canada’s Food Guide?”

Students: “Some people follow a vegetarian diet, which is meatless, or a vegan diet, which includes no animal products at all. Many prefer traditional ethnic or culturally specific diets. Most of these diets are healthy and consistent with the recommendations of the guide, which is available in several different languages. There is also a version for First Nation, Inuit, and Métis people, which includes recommendations about traditional ‘country food’ diets that are based on fish, game, and wild berries.” “Many people are attracted by fad diets that promise rapid weight loss. These can cause more harm than good, making people lose control over their eating or causing uncontrollable feelings of

hunger. A lot of diets recommend consuming more of one kind of food and less or none of another. We should make sure that any diet we choose is balanced and includes a sufficient number of servings from each of the four food groups.”

.....

Teacher prompt: “Some popular food and beverage choices can pose serious health and safety risks. Can you give me an example? What are some credible tools and resources that you can use to find out if a dietary choice is healthy?”

Student: “High caffeine energy drinks can pose serious risks, especially if you drink a lot of them or mix them with alcohol. With some of these drinks, it is easy to drink more than the safe amount of caffeine. Too much caffeine can cause anxiety, insomnia, rapid heartbeat, upset stomachs, and other symptoms. Energy drinks are dangerous when combined with alcohol. You can find out if your food choices are healthy by reading the food label and consulting Canada’s Food Guide, Health Canada’s website, your local public health unit, or a registered dietitian.”

Personal Safety and Injury Prevention

C2.3 demonstrate the ability to analyse situations involving conflict within oneself (e.g., moral and ethical struggles, decision-making problems) or conflict with others (e.g., arguments, fights) and apply appropriate conflict resolution strategies (e.g., **for conflict within oneself:** meditation, journal writing, seeking counselling, talking with a trusted adult or friend; **for conflict with others:** applying de-escalation techniques such as using calming words or taking a break to defuse a tense situation, getting support to respond to dating violence, seeking help from a person in authority) [PS, IS, CT]

Teacher prompt: “Conflict resolution involves many kinds of skills. Problem-solving and decision-making skills can help us identify the causes of a conflict and create solutions. Assertiveness skills can help us keep a conflict under control. Good communication skills or communication strategies such as active listening (e.g., paraphrasing or summarizing what a person is saying or responding to feelings and non-verbal cues) can also be useful. What are some ways that you can prevent a conflict you are involved in from getting out of hand?”

Students: “It helps to listen carefully, use non-confrontational body language, and give lots of physical space. If I were involved in a conflict, I would try to be aware of what I was feeling, and I would calm myself by pausing and taking deep breaths, telling myself I can handle the situation, and stopping negative thoughts before they took over.” “Avoiding conflict in the first place through stress management is a good strategy. As a Cree person, I find that regular smudging connects me to who I am, grounds me, and helps me to manage my feelings.”

.....

Teacher prompt: “The way you deal with conflict with a person will depend to some extent on your relationship. The way you handle a conflict with a parent may be different from the way you handle conflict with a friend. How would you handle a conflict with someone, such as a teacher or an employer, who is in a position of authority over you?”

Students: “I need to be able to express myself in ways that will be taken seriously, while at the same time showing respect for the other person. In any situation, understanding what might have triggered the conflict is important, as is advocating for myself, thinking calmly and critically, and using assertive communication skills.” “In the case of a conflict with an employer, I would make sure that I know what my rights are. For example, if my boss asks me to do work that is unsafe, I know that I have the legal right to refuse. However, in a situation like that I would first try to resolve the situation without conflict by asking my boss for the proper training or a different job. If my boss still insisted that I do the work, I would need to get support from another adult.”

Substance Use, Addictions, and Related Behaviours

- C2.4** demonstrate the ability (e.g., through role play, discussions, debates, analysis of hypothetical situations, case studies, scenarios) to apply adaptive, coping, and management skills (e.g., refusal, assertiveness, and persuasion skills; problem-solving and stress-management skills; time-management and organizational skills) to respond to challenging situations involving substance use, addictions, and related behaviours [PS, IS, CT]

Teacher prompt: “Can you give me an example of a difficult situation that you might have to deal with that is connected to substance use or an addictive behaviour? What factors may put you (or others) more at risk in this kind of situation, and what skills and strategies can you use to protect yourself?”

Students: “Being offered drugs or alcohol at a party would be difficult to deal with. In this situation, factors that increase risk include having lower self-esteem, being bullied, and not feeling supported by your friends. Having thought ahead of time about what to say and how to use refusal and assertiveness techniques would help you deal with this situation more effectively.” “Internet use can become a problem if it interferes with your daily life, school work, or relationships. You may be more at risk if you are using the Internet excessively to relieve stress from an underlying problem, such as depression or anxiety. Recognizing that you need help and knowing how to get it are important coping skills for this situation.”

Human Development and Sexual Health

- C2.5** describe factors that influence sexual decision making (e.g., personal values, having limits and being able to communicate them, being aware of and respecting the limits set by others, peer and family expectations, having physical and emotional desires, media messages, myths and norms related to sexual activity or safer sex practices, participation in activities such as substance use that impair judgement), and demonstrate an understanding of how to use decision-making and communication skills effectively to support choices related to responsible and healthy sexuality [PS, IS, CT]

Teacher prompt: “What are some factors to consider when deciding whether or not to be involved sexually with someone?”

Student: “I need to make sure it’s my choice. Being sexually active is not something that you should feel pressured into doing. I would think about the benefits and consequences of a sexual relationship. I need to consider my values and beliefs to be sure my actions are consistent with them. I want to make sure that my relationship with my partner is affectionate and respectful and that we feel comfortable discussing what we find pleasurable and what our sexual limits are. I must be confident that we would use safer sex practices, such as using condoms to protect against unintended pregnancy or STIs, which are much more common than most people think they are. It’s important to know that it’s okay to delay having sex with my partner until both of us feel ready, so that we’re able to enjoy sex without regrets.”

C3. Making Connections for Healthy Living

By the end of this course, students will:

Healthy Eating

- C3.1** demonstrate an understanding of how they, as consumers, can have an impact on food and beverage choices at school and in the community (e.g., promoting availability of healthy choices in restaurant and cafeteria menus and in grocery stores, raising awareness of ethical and environmental considerations related to food choices) [CT]

Personal Safety and Injury Prevention

C3.2 demonstrate an understanding of health and safety risks in their physical and personal environment, and describe practices and behaviours that can be promoted to minimize the exposure of themselves and others to these risks (e.g., *thinking in advance of the consequences of actions; getting reliable information; following health practices such as handwashing to reduce risks associated with the spread of infectious diseases; staying hydrated; observing road safety rules while biking and walking; avoiding distractions such as using headphones while cycling and walking; listening to music at safe volumes to avoid hearing damage; using insect repellent; wearing a helmet when skiing, snowboarding, or tobogganing*) [PS]

Teacher prompt: “Give me examples of how to keep yourself and others safe when being driven by someone else in a vehicle.”

Student: “Drive only with licensed drivers who are not under the influence of drugs or alcohol, and support friends in doing the same. Do not distract the driver. Wear a seatbelt. I can encourage anyone who is driving me not to do anything, like eating or using a cell phone, that could be a distraction while driving. Using a cell phone while driving is against the law.”

.....

Teacher prompt: “What are the health risks of too much sun or UV exposure? What can you do to protect yourself?”

Student: “In the short term, you run the risk of getting sunburn or sunstroke. In the longer term, you increase your chances of getting skin cancer, developing cataracts, or having your skin age faster. You run the same risks when you use tanning beds and sunlamps as when you go outdoors, because they expose you to ultraviolet rays too. Because of these health risks, it’s not legal for anyone under 18 to use tanning beds or sunlamps. You can protect yourself when you go outdoors by checking the UV index and limiting your exposure: wear a hat, put on sunscreen, and avoid staying in the sun for long periods of time.”

.....

Teacher prompt: “If you’re thinking of getting a tattoo or a piercing, what do you need to consider in advance?”

Student: “You need to think about whether you want to have the tattoo or piercing forever, and you need to think about safety. You could get infected with hepatitis B or C, HIV, or other infections if the tools are not sterilized properly. Piercings also need to be cared for and cleaned carefully because bacteria can get in and cause infection.”

Substance Use, Addictions, and Related Behaviours

C3.3 identify public issues related to various addictions (e.g., *alcohol, drugs, gambling, tobacco*), and analyse their impacts and the connections between these impacts locally, nationally, and internationally [CT]

Teacher prompt: “Addictions affect people from all social, economic, and cultural groups and may have consequences not only for the individuals involved but also for their families, neighbourhoods, and communities, and even beyond. Choose a type of addiction and identify the possible impacts of that addiction at various levels. Examples of impacts may include damaged relationships, violence and social problems, crime, direct economic costs such as those related to health care, welfare, and policing, and indirect economic costs such as lost productivity.”

Human Development and Sexual Health

- C3.4** describe some common misconceptions about sexuality in our culture, and explain how these may cause harm to people and how they can be responded to critically and fairly [CT]

Teacher prompt: “Everyone in Canada has the right to live free of discrimination and with the same rights as everyone else. We have an obligation to treat everyone with fairness and respect, just as we want others to respect us and our choices. People sometimes face discrimination because of beliefs that others have come to accept. Understanding about sexuality, sexual behaviour, and gender behaviour varies widely. Some beliefs may be misconceptions based on erroneous information. If we encounter what we think is discrimination or a misconception, how can we respond to it?”

Student: “Getting more information, having open-minded discussions, and thinking critically about the assumptions behind various ideas can help us think critically about their credibility. We must also encourage people to respect the rights of others. That respect is enshrined in the Ontario Human Rights Code and the Canadian Human Rights Act.”

.....

Teacher prompt: “Heterosexism is the assumption that if someone is in a romantic or sexual relationship, it is with someone of the opposite sex. Think about the effect this might have on a person who is questioning his or her gender identity or sexual orientation. Heterosexism is often seen in our use of language. By using more inclusive language ourselves, and supporting its use in literature and the media, we can create an environment that is comfortable for all and where all feel they are a part. What are some other ways in which we can reduce homophobia, increase understanding, and support those who are questioning their gender identity or sexual orientation?”

Students: “We can contribute to a positive school climate in which everyone feels safe, comfortable, and accepted by showing respect for others.” “We can object when we see people being harassed or treated unequally and report the incident to trusted adults.” “We can participate in gay-straight alliances and other student-led activities that promote understanding and the development of healthy relationships.”

- C3.5** explain how being in an exclusive relationship with another person affects them and their relations with others (*e.g., personal benefits such as learning about oneself, emotional comfort and security, sense of belonging; impact on peer relationships, family relationships, time management, homework, choice of activities; feelings and challenges involved in ending a relationship*) [PS, IS, CT]

Teacher prompt: “Breakups are a normal occurrence in teenage life and happen for lots of reasons. What advice would you give to someone whose relationship has ended?”

Students: “Show respect to the person you’ve broken up with. Being respectful means not saying bad things about your former partner and not sharing confidential information.” “Acknowledge how you feel, recognize the hurt, sad, relieved, or angry feelings, and work on looking ahead. Talk with your friends and family about how you feel. Consider trying something new. Do something that interests you, such as joining a club or taking part in physical activity. Through the experience, you can learn that you can be self-reliant, that you can overcome difficult feelings, and that you can survive the loss of one relationship without fearing that you’ll never find another.”
